

electric cars

electric car · Q193692 — automobile propelled by an electric motor using energy stored in rechargeable batteries
Wikipedia pageviews, 2024-09-01 to 2026-08-31 (24 complete months) · human traffic only · generated 2026-09-26

Each row carries a confidence label. Do not quote a LOW row as a finding — see the reasons below the table.

Language	Article measured	per 1M	YoY raw	YoY norm	Confidence	Shape
German (de)	Elektroauto	6.86	-15.6%	-8.9%	HIGH	
French (fr)	Voiture électrique	3.62	-31.4%	-23.2%	HIGH	

Year-over-year change in share of edition traffic

Assumptions and limitations

- Wikipedia pageviews measure curiosity, not willingness to pay. Treat any finding here as a direction to validate, not as demand.
- Figures are per LANGUAGE EDITION, one edition serves many countries (en covers the US, Australia, Canada, South Africa and Ghana alike).
- Normalized figures divide by each project's total traffic. This is what makes editions comparable: every edition is losing human readers, at rates from about -7% (en) to -25% (uk) per year; so raw counts understate a topic that is merely holding its share.
- Bot traffic is excluded (agent=user). Raw all-agent traffic runs roughly a third higher.
- Confidence is computed by a fixed rubric over the underlying series (volume, level shifts, spikes, data gaps, history length), not judged. It flags whether a figure is safe to quote, not whether the topic is a good business bet.

electric cars — views by month

Human pageviews per language edition (agent=user), complete months only. Figures are abbreviated; exact values are in the run directory.
